Purakal Series 110 Pneumatic Cylinder

A True Non-Lubricated High Speed Super Cushion

Our new 110 Series pneumatic cylinder was designed specifically for ultra-high speed hard stop applications that require the full deceleration of an NFPA cushion cylinder without compromising speed or durability. This highly developed cylinder was manufactured to NFPA specifications making it an easy retrofit in any standard or custom application.

* For optimal performance it is our recommendation that this cylinder operate without any lubrication from oilers or other such lubrication systems.
